

UNIT # 9

THE MENACE OF DRUGS

A. Comprehension Questions:

(i) What do you understand about drug addiction? Explain briefly?

Ans: Drug addiction begins as a voluntary act but can quickly turn into a physical and psychological need. It affects brain function, making it difficult to stop, and eventually disrupts daily life, relationships, and responsibilities.

(ii) Why is drug education important for combating the dangers of drug addiction?

Ans: Drug education fosters a culture of safety and informed decision-making. It helps individuals understand the harmful effects of drugs, encourages healthier choices, and reduces substance misuse through evidence-based strategies.

(iii) What are the devastating effects of drugs on the nation's youth?

Ans: Drugs and alcohol undermine health and can destroy the future of young people. They affect mental and physical development and increase the risk of addiction and overdose.

(iv) Write some effective strategies for coping with drug addiction?

Ans: 1. "Engaging students in drug education can help shape their attitudes and behaviors."

2. "It can also help them develop strategies for risky situations and empower them to make safer and healthier choices."

3. "To avoid developing problems with a prescription medication, it's important to take it only as directed."

(v) For what reason truly do individuals from varying backgrounds encounter issues with drug use, as indicated by the text?

Ans: People from all backgrounds can face drug problems due to curiosity, peer pressure, or to relieve stress, anxiety, or depression. It's not only illegal drugs but also prescription medications that can lead to abuse. Drug use often begins socially but can quickly develop into addiction. The reasons vary but the impact is widespread.

(vi) How do you think drug abuse affect an individual's life?

Ans: Drug abuse can cause people to miss work or school and perform poorly. It can lead to neglecting family and social responsibilities and creates a physical and psychological need for the drug. Over time, drug abuse consumes life, stopping social and intellectual growth. It changes how the brain functions and affects overall health.

(vii) Recommend some strategies that schools can adopt to handle drug abuse among youth?

Ans: Schools should provide drug education and support for all students. They need to identify and help students vulnerable to drug misuse, either within school or through other services. Schools must have clear drug policies involving the whole community, applied consistently. Educational programs should focus on prevention and informed decision-making.
